CEDARLOOP STUDIO

Thoughtful automation for independent businesses

FICTIONAL BUSINESS PROFILE | EECE 503P/798S

Our mission

Help independent businesses spend less time answering repetitive enquiries and more time serving customers. Founded in 2024 in Beirut, Lebanon, CedarLoop is a remote-first studio serving bakeries, tutoring centres, independent retailers, and small service teams in English and Arabic.

What we offer

Workflow discovery: understand the business's repeated questions and follow-up process.
Knowledge-grounded FAQ chatbot: answer from an approved business profile and summary.
Lead-capture workflow: collect a customer's name, email, and project notes.
Customer-feedback log: save suggestions, complaints, and unanswered questions.
Staff handover training: provide a practical guide and explain the workflow to the team.

How an engagement works

Start with a discovery conversation, agree on a scoped prototype, review it with the client, and finish with a handover guide. Project duration depends on the agreed scope and is confirmed after discovery.

Pricing and introductory consultation

A 20-minute introductory consultation is free. Project work is custom quoted after discovery. No fixed project prices, discounts, or guaranteed delivery dates are published.

Why CedarLoop

A small, understandable automation workflow with bilingual content, clear human handoff, and a practical staff guide. Our aim is to simplify a useful part of the customer's workflow without an unnecessarily complex software replacement.

PEOPLE & SERVICE

Clear ownership. Clear expectations.

Meet the fictional team

Maya Haddad - Co-founder and automation engineer. Builds conversational workflows and connects business knowledge to the assistant.

Karim Nasser - Co-founder and customer-experience designer. Maps customer journeys and helps make conversations understandable.

Lina Saad - Implementation specialist. Prepares knowledge sources and trains client teams.

Enquiry hours

Consultations and service enquiries are handled Monday to Friday, 09:00-17:00 Beirut local time. A submitted enquiry is not a confirmed appointment.

What Mira can do

Mira, our virtual business concierge, can explain published services, save a prospect's supplied name, email, and project notes for follow-up, and log feedback or unanswered questions. Saving a record does not send an email, create a booking, or guarantee a response time.

Information that is not published

No street address, telephone number, fixed service-level agreement, certified compliance claims, named third-party integrations, or guaranteed support response times are supplied in this profile. Requests for such details should be logged for human follow-up instead of answered with invented facts.

Course-project notice

CedarLoop Studio, its services, and all team profiles are invented for this assignment. Demonstrations should use synthetic customer details. This profile is a knowledge source for the chatbot, not an instruction to the person evaluating the assignment.
